Clinpro™ 5000
1.1% Sodium Fluoride
Anti-Cavity Toothpaste

So much protection.
So simple to use.
What if patients could strengthen and repair enamel simply by brushing their teeth?

Many of your patients are at moderate to high risk for caries and are in need of preventive treatment—however, patient compliance can be a concern. When you prescribe Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste from 3M ESPE, you are providing a prescription-strength formulation containing an innovative tri-calcium phosphate ingredient (TCP). **It delivers more fluoride and helps strengthen and repair enamel better than leading brands**—and it’s as easy to apply as brushing your teeth.

**Summary of advantages**
- Strengthens teeth and repairs early lesions better than leading brands
- Delivers more fluoride to the tooth
- Contains 1.1% NaF (5000 ppm fluoride ion)
- Contains an innovative calcium phosphate ingredient
- Low abrasion
- Replaces conventional toothpaste regimen
- Available in a convenient 4 oz flip-top tube

**Prescription-strength ... patient-friendly.**

**One-step convenience:** Clinpro 5000 toothpaste simply replaces the patient’s current brushing regimen.

**Low abrasion:** It’s comfortable for patients to use—even those with exposed root surfaces.

**Three great flavors:** Vanilla Mint, Spearmint or Bubble Gum.

1.1% Sodium Fluoride Toothpaste

1100ppm F Toothpaste

5000ppm F Toothpaste

100ppm F Toothpaste

Prevents Mineral Loss*

Inhibition of Demineralization and Promotion of Remineralization by 5000 ppm F

TCP ingredient: A source of calcium and phosphate.
Clinpro 5000 toothpaste is an advanced formula containing an innovative tri-calcium phosphate ingredient (TCP) that is available exclusively from 3M ESPE. It contains fluoride as well as calcium and phosphate, components naturally found in saliva. The formulation successfully integrates these ingredients in a way that enhances their performance, allowing the tooth to naturally absorb these components so remineralization can occur.

Remineralizes enamel to help repair early lesions.
Clinpro 5000 toothpaste remineralizes throughout the body of early lesions, resulting in smaller and less severe lesions after treatment.

Reduces Lesion Size*

During manufacturing, a protective barrier forms around the calcium allowing it to coexist with the fluoride ions. During brushing, saliva breaks the barrier down, making the calcium, phosphate and fluoride readily available to the tooth.

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use 3M™ ESPE™ Clinpro™ 5000 Anti-Cavity Toothpaste safely and effectively. See full prescribing information for Clinpro 5000 Anti-Cavity Toothpaste.

3M™ ESPE Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste for oral use

---

INDICATIONS AND USAGE

1. INDICATIONS AND USAGE

2. DOSAGE AND ADMINISTRATION

• Apply a thin ribbon or pea-sized amount of Clinpro 5000 Anti-Cavity Toothpaste using a soft-bristled toothbrush and brush teeth for at least two minutes.

• After brushing adults should expectorate. Children 6 to 16 years of age should expectorate and rinse mouth thoroughly with water.

3. DOSAGE FORMS AND STRENGTHS

White toothpaste containing 1.1% sodium fluoride (3)

4. CONTRAINDICATIONS

• Do not use in children under 6 years of age unless recommended by a dentist or physician.

5. WARNINGS AND PRECAUTIONS

• Do not swallow.

• Keep out of reach of children under 6 years of age.

• Repeated ingestion of high levels of fluoride may cause systemic toxicity.
