With controlled memory, VaryFlex One provides a much smoother experience with less 'grab' than other reciprocating systems, and in most cases requires just one file to prepare the canal.

PATTERSON® NITI ROTARY FILES

6/pkg

Patterson® Nickel Titanium (NiTi) Rotary files have radial-landed U-shaped flutes that “lift” debris coronally, allowing for a crown down technique, continuously tapering preparation from orifice to apex. The safety tip design has minimal transition angle to prevent ledging and transporting.

- The best shape for obturation
- A hand file must be used prior to using any rotary instrument
- Safe ended tip
- 13 mm length handle
- Colour-coded bands on instrument define instrument tip size
- Colour-coded silicone stops define instrument taper

Bonus — it bonds and seals caries-affected dentin.

3M™ Scotchbond™ Universal Plus Adhesive has the same high bond strength to caries-affected dentin as to sound dentin, so you can be more confident when performing minimally invasive preparations. It also seals caries-affected dentin by forming a well-defined, void-free hybrid layer. Try Scotchbond Universal Plus Adhesive to see why 100% of Dental Advisor consultants would recommend it to a colleague.¹
