How Does Your Practice Stack Up?

**Find out with the
Southern Tier Study Club**

Thursday, September 27, 2012
7:00 p.m.

The Lecture Hall at Lourdes Hospital
Binghamton, N.Y.

How Does Your Practice Stack Up?

Join your peers to explore CEREC digital impressing, in-office milling and learn more about GALILEOS cone beam integration for guided implant surgery.

The Foundation of Digital Dentistry: CEREC Digital Impressing

Discover how optical impressions save time and money. In addition, it is much more comfortable for the patient than a conventional impression. Moreover, unlike physical impressions, digital impressions are immune to dimensional changes. This results in superior precision – a prerequisite for sustained quality. Electronic transfer of digital impressions allows for direct feedback from your dental technician, avoiding lab restorations that do not fit.

One Visit Dentistry: CEREC In-Office Milling

Witness the intuitive design process and high-speed milling of a restoration coupled with optimum precision, e.g., crowns can be completed in just 5 to 10 minutes with a milling accuracy of 25 µm. One machine achieves all indications (inlays, onlays, crowns, veneers and temporary bridges) and materials (feldspar/glass ceramics, lithium disilicate and zirconium oxide). Your patients only have to interrupt their schedules one time and feel the pinch of your needle one time.

Confidence of Surgical Guides: GALILEOS Integration with CEREC

Combine CEREC digital impressions and computer-aided design with the diagnostic security of Sirona's 3D X-ray systems for genuine integrated implantology. It is now possible to perform surgical and prosthetic planning simultaneously – and then implement this plan precisely using a surgical guide.

Questions?
