SAFE RELAX®

AUTOMATIC CROWN AND BRIDGE REMOVER

UNIQUE!

Gentle, efficient and quick

anthogyr
A global solution for dental implantology
An effective, stress-free automatic system

Removal of a bridge or crown remains a delicate procedure. With these constraints in mind, anthogyr has developed the SAFE RELAX®. The intensity and frequency of the micro-strokes can be controlled to ensure enhanced comfort and results, letting you work in complete safety.

The SAFE RELAX® crown and bridge remover enables you to successfully carry out crown and bridge removals without stress for the patient.

- Its unique non-reloading mechanism fits onto all brands of electric and air motors.
- Its high-frequency micro-strokes make it the fastest system in the world: up to 20 movements per second!
- Porcelain is protected by the regular and controlled intensity of the micro-strokes.

The SAFE RELAX® comes with a wide range of inserts to suit all prosthesis configurations.

The main assets

SAFE RELAX®, GENUINE COMFORT FOR THE PATIENT

- New ergonomic design
- New one-click single attachment system!
- High-frequency of micro-strokes
- New intuitive intensity adjustment ring
- Non-reloading mechanism
- Genuine comfort for the patient!
- No damage to the porcelain: ATD system
- New packaging
- Fits any brand of electric or air motor
- Sterilization box for hooks and wire-tips (optional)
**GENTLE EFFICIENCY**

**HIGH-FREQUENCY EFFICIENCY** → The **SAFE RELAX®** converts the motor’s rotary motion into a series of ultra-fast micro-strokes. The recommended speed-range is between 5,000 and 25,000 rpm. **Maximum frequency of 20 micro-strokes per second !**

**THE COMFORT OF CONTROLLED INTENSITY** → **5 progressive adjustments** of the force applied to the porcelain (Fig. A). **Total control** of the force applied to the porcelain. **Non-stressful** for the patient as no resonance is felt !

**ERGONOMIC DESIGN** → For improved grip of the instrument.

**NON-RELOADING MECHANISM** → Maintains a constant working axis and precise, continuous contact with the porcelain.

**ONE-CLICK INSERT POSITIONING** → The bayonet attachment lets you insert your hook or wire-tip in a single hand movement (Fig. B). Eliminates the risk of inserts unscrewing !

**ATD WIRE-TIPS SYSTEM**

These are essentially recommended for bridge removal, they are inserted into interdental spaces (Fig. C and D). **Bridge protection.** **Safety :** wire-tips provide sturdy support (no risk of it slipping). **Working along the tooth axis :** reducing the risk of root fracture. **Ease of crown removal.**

**SIMPLE AND RAPID OPERATING MECHANISM IN 4 EASY STEPS**

1. Attach hook to your **SAFE RELAX®** with a single click.
2. Fix your **SAFE RELAX®** onto the electrical or air motor of your unit.
3. Position the insert on the porcelain.
4. Press the motor pedal: a simple traction motion sets off a series of ultra-fast micro-strokes, with adjustable intensity and frequency. The micro-strokes stop as soon as traction is released or the motor stops.

Description and product references

Kit Ref. 6961C (picture below)

→ **SAFE RELAX®** + 4 hooks + 2 single and 1 double wire-tips.

Kit Ref. 6950C

→ **SAFE RELAX®** + 4 hooks.

Sterilization box
Ref. 5932 (picture above)

→ Optional for hooks and wire-tips

---

Elbow hook for crowns on posterior teeth, Ref. 5928

Flat hook with non-slip grooves for crowns on anterior teeth, Ref. 5929

Hook for crowns on premolars, Ref. 5927

Edge hook for bridges, Ref. 5925

50 mm wire-tip for bridges*  
60 mm wire-tip for bridges*  
95 mm ceramic wire-tip for ceramic bridges of 3 or 4 elements**, Ref. ATD 022

Screw for wire-tip, Ref. ATD 080

Screwdriver for wire-tip, Ref. ATD 082

---

Bayonet attachment system!

* for 50 mm and 60 mm wire-tips, a spare cable is included in the kit.
** for ceramic wire-tip, a 150 mm cable is included in the kit.
