

Adper™ Easy Bond

Self-Etch Adhesive

oneederful

One bottle.*
One coat.

*Also available in unit dose.

Get onederful results. Fast.

With Adper™ Easy Bond Self-Etch Adhesive you are just one bottle and one step away from a strong, reliable bond to dentin and enamel. No mixing or bottle shaking necessary. Whether you are using a convenient disposable unit-dose applicator or bottle, bonding for direct light-curing restorations has never been simpler or faster.

35-second placement time reduces risk of contamination

20 Seconds. Apply adhesive to tooth surface

5 Seconds. Dry the adhesive

10 Seconds. Light cure

One consistent result.

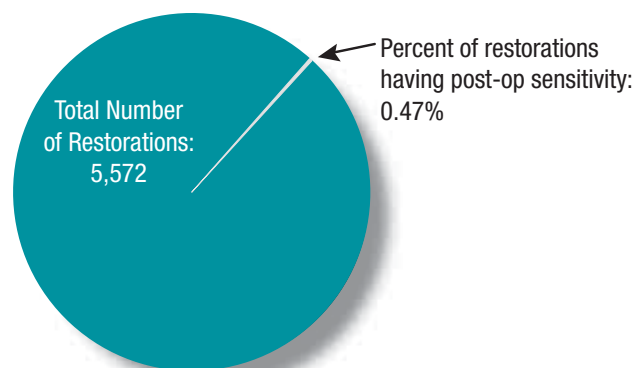

Virtually no post-op sensitivity.

Eliminating post-operative sensitivity is high on every dentist's list. With Adper™ Easy Bond Self-Etch Adhesive the etching and penetration of resin monomers into the demineralized dentin and enamel are carried out simultaneously in one step, thus preserving the collagen structure. This means you are not dependent on maintaining a moist bonding environment, which is a requirement of 5th generation, one-bottle adhesives.

Less than 0.5% post-operative sensitivity.

In a field evaluation of more than 5,000 restorations placed using Adper Easy Bond adhesive, less than 0.5% reported post-operative sensitivity.* Positive outcomes like this are reason enough to try Adper Easy Bond adhesive on your next restoration.

Adper™ Easy Bond Post-Operative Sensitivity

Less than 0.5% (1 in every 200 cases) reported post-operative sensitivity with Adper™ Easy Bond Self-Etch Adhesive.

*Adper™ Easy Bond Self-Etch Adhesive and
Filtek™ Supreme Ultra Universal Restorative
make an unbeatable combination.*

Consistent bonding results on dentin and enamel.

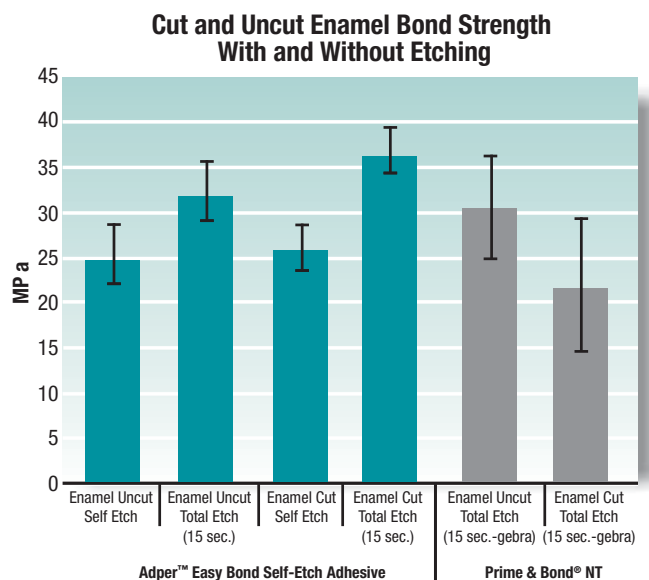

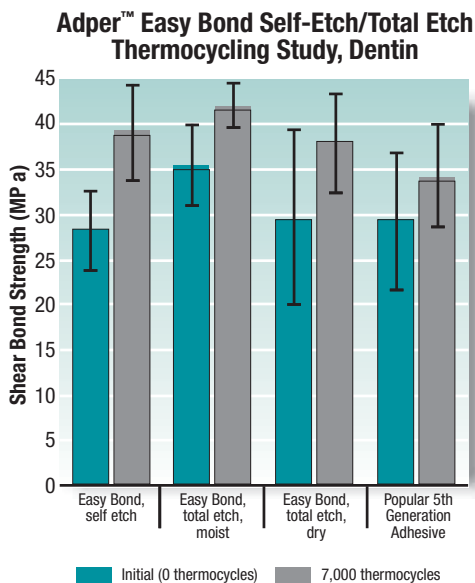

Two main factors combine to give Adper™ Easy Bond Self-Etch Adhesive excellent bond strength: First, the adhesive formula draws on the proven chemistry and clinical history of Adper™ Single Bond Plus Adhesive and Vitrebond™ Copolymer. The Vitrebond Copolymer assures that Adper Easy Bond adhesive is moisture tolerant, and therefore less technique sensitive to moist or dry dentin compared to 5th generation adhesives. Second, Adper Easy Bond adhesive utilizes 3M ESPE's unique filler technology to optimize bond performance.

Selective Enamel Etching and Self-Etch Adhesives.

Some dentists opt to “selectively” etch prepared enamel when using self-etch adhesives. Also, a separate enamel etch is typically recommended for 7th generation materials when uncut enamel is involved. Adper Easy Bond adhesive is uniquely suited to the selective etch technique.

With some self-etch adhesives, using a separate etchant on dentin can actually decrease the bond strength to dentin and affect margin quality.^{1,2} However, with Adper Easy Bond adhesive, if the dentin is inadvertently etched during the selective enamel etching process, the dentin bond strength is not adversely affected, even if it is dried.

Whether you are using the ultra-simple Adper Easy Bond adhesive one-bottle, one-coat process, or selectively etching in addition to applying Adper Easy Bond adhesive, you can achieve high bond strengths and reduced post-operative sensitivity with Adper Easy Bond adhesive.

² Ikeda M., Tsubota K., Takamizawa T., Yoshida T., Miyazaki M., Platt JA. Bonding Durability of Single-Step Adhesives to Previously Acid-Etched Dentin

A simpler solution is here.

Choosing the right adhesive system and applying it correctly is critical to producing successful, long-lasting restorations. Yet, with so many brands and types of adhesives out there, choosing is anything but easy. Many dentists use multiple kinds of adhesive systems depending on the benefit they are trying to achieve. Does the adhesive reduce post-operative sensitivity? Does it have proven in-vitro, long-term bond strength? Is it easy to use? Adper™ Easy Bond Self-Etch Adhesive provides all these benefits and, best of all, it requires only one bottle and one easy step.

Total-Etch vs. Self-Etch Technique

	Total-Etch Adhesives	Adper™ Easy Bond Self-Etch Adhesive
Enamel		<i>Optional</i> 
Dentin		
	15-Second Etch: Enamel & Dentin	15-Second Optional Selective Etch: Enamel

One bottle.* Multiple advantages.

Adper™ Easy Bond Self-Etch Adhesive is a simple one-bottle, one-coat, self-etch adhesive solution. In addition to being fast and easy to use, Adper Easy Bond adhesive offers:

- Strong bond performance
- Virtually no post-operative sensitivity
- Shorter application time (35 seconds) for less risk of contamination
- Moisture tolerance – it works on moist or dry enamel or dentin

*Also available in unit dose.

Ordering Information

Item Number	Product Information
41245	Adper™ Easy Bond Self-Etch Adhesive Intro Kit Kit includes 5ml adhesive vial; 50 disposable mixing wells, 50 disposable microbrushes
41246	Adper™ Easy Bond Self-Etch Adhesive Refill—5ml adhesive vial
41248	Adper™ Easy Bond Self-Etch Adhesive Unit Dose Intro Pack—40 unit dose
41249	Adper™ Easy Bond Self-Etch Adhesive Unit Dose Giant Pack—100 unit dose
41252	Adper™ Easy Bond Self-Etch Adhesive Unit Dose Bulk Pack—200 unit dose
7523	Adper™ Scotchbond™ Etchant Delivery System. Contains two 3ml 35% phosphoric etchant syringes and 50 etchant dispensing tips
7523T	Adper™ Scotchbond™ Etchant Dispensing Tips—25/bag
7423	Adper™ Scotchbond™ Etchant Gel—One 9ml vial
