IPS lvocolor is a universal range of Stain and Glaze materials for the press, CAD and layering ceramics from lvoclar Vivadent and the Zenostar[®] zirconia materials from Wieland Dental. Now dental technicians only need one assortment to customize and glaze their restorations. This allows you to work more effectively, improve the economic efficiency of the lab and achieve restorations of a consistently high quality.

What advantages does IPS Ivocolor offer to dental technicians?

- Individual freedom in customizing restorations due to select shade compositions
- Streamlined handling due to a new paste formulation
- High gloss obtainable at firing temperatures as low as 710°C
- Untainted gloss results no grey or white discolouration
- Suitable for both high- and low-fusing IPS ceramic materials

IPS Ivocolor Shade

Shade adaptation: swift, easy, exquisite

IPS Ivocolor Shade pastes designed for matching A-D tooth shades:

- 9 ideally coordinated IPS lvocolor Shade Dentin materials providing high efficiency in the customization of restorations
- 3 IPS Ivocolor Shade Incisal materials for natural looking incisal surfaces
- Easy to use and homogeneous shade application due to new gel formulation
- Especially suited for the customization of monolithic restorations
- Varying levels of fluorescence, depending on the shade

IPS Ivocolor Glaze

The new standard in glazing materials

IPS Ivocolor Glaze for reliable firing results with exact shades:

- High gloss in a single firing process
- Consistent gloss, independent of the ceramic substrate (e.g. cut-back)
- No grey or white discolouration
- Glazes with and without fluorescent effect
- Available in a powder and paste delivery form

Glazing material for both high- and low-fusing ceramics

High gloss obtainable at firing temperatures as low as 710°C
