

# WHAT SETS RICHMOND APART?

Richmond, as a company, has a long history in the dental market having been in continuous operation since 1895. Richmond products are recognized for high quality and are a staple in the dental practice.

## Why does a dentist buy Richmond COTTON ROLLS over other brands?

Richmond cotton rolls are made with a superior grade of cotton and manufactured without methylcellulose (starch). As a result, the cotton rolls are more absorbent and do not stick to the tissue in the mouth (cotton rolls sticking to the tissue are an irritant to the dentist). In addition, Richmond braided rolls come in a variety of sizes perfect for bleaching, full arch reconstruction, quadrant dentistry and pediatric dentistry.

Cotton rolls do not stick to the tissue in the mouth

Braided Rolls come in a variety of sizes

## Why are Richmond NONWOVEN SPONGES a market leader?

Simply, Richmond nonwoven sponges are made with the highest quality fabrics. The higher quality fabrics result in sponges with greater absorbency and a softer feel. Independent testing at the Philadelphia College of Textiles validates our absorbency claims. In addition, Richmond has the most extensive line of nonwoven sponges, Richmond 4 ply poly/rayon is an economical choice, the Richmond 100% cotton nonwoven is a perfect general use sponge providing superior absorbency without lint, and the MultiPly 8 ply poly/rayon is the ultimate in absorbency when needed for heavy salivation or bleeding.

Greater absorbency and a softer feel

Nonwoven Sponges are made with the highest quality fabrics

## Why Richmond FACE MASKS?

Richmond masks are comfortable, nonirritating, and very breathable. Richmond has strong brand recognition.

Comfortable & breathable

Strong brand recognition

## Why buy an INFECTION CONTROL ROLL DISPENSER?

The IC Roll Dispenser is fully autoclavable and keeps rolls sterile until use. The IC Roll Dispenser is sold with 200 medium 1 1/2" braided rolls, but any 1 1/2" medium roll will fit.

Keeps rolls sterile until use

Fully autoclavable

# WHAT SETS RICHMOND APART?

Richmond, as a company, has a long history in the dental market having been in continuous operation since 1895. Richmond products are recognized for high quality and are a staple in the dental practice.

## Why use a REFLECTIVE SHIELD PLUS®?

Reflective Shields Plus® can be used as a cotton roll substitute and is designed to provide absorption and superior illumination during common procedures such as sealants, crown preps, composite fillings and restorations. They are highly absorbent, and, unlike competitive products they do not swell up in the mouth and compromise the work area. Their unique film truly illuminates the oral cavity.

Provides superior illumination during common procedures

Highly absorbent and will not swell up in the mouth

## Why purchase a FoamEZ® SPLASH HOOD LINER?

The FoamEZ® Splash Hood Liner provides protection against prosthesis chips or cracks in the event the prosthesis releases from the hand during polishing. The FoamEZ® Splash Hood Liner helps keep the Splash Hood clean by covering the inner surface and catching flying debris.

Provides protection against prosthesis chips or cracks in the event the prosthesis is dropped

Keeps the Splash Hood clean

## What is the purpose/value of STERIPOCKET® SPONGES?

SteriPockets® are designed for dentists who perform extractions or oral surgery. The prepackaged sterile sponges are dosage packed to save money for the dentist (give away a pack or two instead of a handful of sponges), saves time and better utilizes staff, and provides a more professional image to the patient.

Perfect to dispense to patients after extractions

Professional-guaranteed Sterile

## Why buy a SOLUTION TRAY?

The Solution Tray is an elegant chair side tray, designed to dispense a variety of solutions accurately, conveniently, and economically, while reducing the risk of cross contamination. Examples of medicaments that can be dispensed are chlorhexidine, hemodent, alcohol, liquid etch, caries detector, and irrigating solution.

Dispense a variety of solutions accurately, conveniently, and economically

Reduces risk of cross contamination
